Quality Control Notes:

Routine sample quality control results such as matrix spikes and laboratory duplicates are reported on the quality control pages of this report. Any results not within QC criteria are discussed in the analyst notes section. Instrument quality control results, such as continuing calibration verification (CCV), continuing calibration blanks (CCB), initial calibration verification (ICV), initial calibration blank (ICB), and instrument blanks (IBL), were within QC criteria unless stated in the analyst notes section. Analytes that exceed the upper control limits for QC samples but are not detected will not be "J" flagged. All sample detections for these analytes will be qualified as estimated (J flagged).

Analyst Notes:

All sample results that were analyzed past holding times are qualified as estimated.

Calibration Summary:

Pentachloroethane and dichlorodifluoromethane did not produce a linear or quadratic calibration curve. All results for these compounds will not be reported. Discussion of further QC failures for these analytes are not necessary.

The continuous calibration verification (1D29001-CCV1) had 1,1,2,2-tetrachloroethane and 2,2-dichloropropane with high recoveries. Since these compounds were not detected in any of the samples, no qualification is required.

The continuous calibration verification (1D29001-CCV2) had 1,1,2,2-tetrachloroethane and

Case Comments

1,2-dibromo-3-chloropropane with high recoveries. Since these compounds were not detected in any of the samples, no qualification is required. The compound 1,3-dimethyl adamantane had low recovery. All results for this compound associated with this CCV qualified as estimated.

The continuous calibration verification (1D29001-CCV3) had 1,1,2,2-tetrachloroethane and 1,2-Dibromo-3-chloropropane with high recoveries. Since these compounds were not detected in any of the samples, no qualification is required. The compounds chloromethane, 1,3-dimethyl adamantane and vinyl chloride had low recoveries. All results for these compounds associated with this CCV are qualified as estimated.

The continuous calibration verification (1D29001-CCV4) had 1,1,2,2-tetrachloroethane, 1,2-dibromo-3-chloropropane and hexachloroethane with high recoveries. Since these compounds were not detected in any of the samples, no qualification is required. The compound 1,3-dimethyl adamantane had low recovery. All results for this compound associated with this CCV are qualified as estimated.

1D29001-CRL1 showed high recoveries for 1,1,2,2-tetrachloroethane and 1,2-dibromo-3-chloropropane. Since none of the samples had detections reported for these two analytes, no qualification is required.

QC Sample Summary:

The blank spike (1100162-BS1) had high recovery for 2,2-dichloropropane. Since this compound was not detected in any of the samples, no qualification is required.

The standard reference material (1100162-SRM1) had low recovery for tetrachloroethene. This compound is qualified as estimated for all samples.

The matrix spike (1100162-MS1 and it's duplicate 1100162-MSD1) had 2,2-dichloropropane and 1,1,2,2-tetrachloroethane with high recoveries. The matrix spike duplicate (1100162-MSD1) had high RPD for the following compounds: 2,2-dichloropropane, 1,2-dibromo-3-chloropropane and 1,1,2,2-tetrachloroethane. No qualification is required because the native sample showed no detections for these analytes.

The holding blank 1104027-08 showed methylene chloride above the reporting limit. Since none of the samples were affected; no qualification required.

Internal Standard/Surrogate Summary:

No difficulties or unusual circumstances were encountered during this analysis.

Manual Integration Summary:

Manual integrations were performed.

The non-target peaks reported as Tentatively Identified Compounds (TICs) were identified using the NIST05 spectral library and the instrument manufacturer's (Agilent Technologies) search algorithm. To be identified as a TIC, a peak had to have an area at least 10% as large as the area of the nearest internal standard and a match quality greater than 80 %. (The TIC match quality is based on the number and ratio of the major fragmentation ions. A perfect match has a value of 100%.) Although the TIC report is essentially a qualitative report, an estimated concentration is calculated based on a response factor of 1.00 and the area of the nearest internal standard. The search for TIC includes the whole chromatogram from 3.0 to 33.0 minutes.

NOTE: TICs are compounds that can be detected, but, without the analysis of standards, cannot be confirmed or reliably quantified. Often times TICs are representative of a class of compounds rather than indicating a specific compound.

The following samples had TICs:

METHOD/ANALYST(S): SOP ORGM-515, Determination of Semivolatile Organic Compounds Using EPA Method 8270D / VCM & DN**Work Order:** 1104024**Batch:** 1100175**SAMPLE RECEIPT INFORMATION:**

Project: Pavillion 2011 #1

Date Received: 04-20-2011

Total Samples: Eight samples

Temperature: Cooler #1 = 3 °C, Cooler #2 = 3 °C

Case Comments

Sample Preservation: Samples were preserved with ice.

Holding Time Summary: All samples were extracted and analyzed within holding time.

Extraction and Analysis:

Samples for semi-volatile analysis were prepared and extracted according to SW-846 method 3520, "Continuous Liquid-Liquid Extraction" for water samples. One liter of sample was extracted with methylene chloride and concentrated to one milliliter of extracts. Samples were analyzed by EPA method 8270. The method was calibrated from 0.1 ug/mL to 10.0 ug/mL. The system maintained passing tunes through out the run.

Quality Control Notes:

Routine sample quality control results such as matrix spikes and laboratory duplicates are reported on the quality control pages of this report. Any results not within QC criteria are discussed in the analyst notes section. Instrument quality control results, such as continuing calibration verification (CCV), continuing calibration blanks (CCB), initial calibration verification (ICV), initial calibration blank (ICB), and instrument blanks (IBL), were within QC criteria unless stated in the analyst notes section. Analytes that exceed the upper control limits for QC samples but are not detected will not be "J" flagged. All sample detections for these analytes will be qualified as estimated.

Analyst Notes:

Sample 1104024-06 (EPAMW02-0411), had pH greater than 12. This sample showed high amount of hydrocarbons (gasoline). Due to high level of hydrocarbons from sample 1104024-06, the first two surrogates had low recoveries. Since the rest of the analysis was not affected, no qualification of data is required. The last internal standard, perylene-d12 had low recovery, all compounds associated with this internal standard are qualified as estimated values. Benzoic acid exceeded the calibration range and is qualified as estimated.

The sequence was stopped and restarted two hours later after reestablishing the baseline. Hence, the final tune missed the twelve-hour clock for Sample 1104024-08. All results for that sample are qualified as estimated.

Sample 1104024-07 had pH greater than 12 and very high level of hydrocarbons. This sample was determined on a 10X dilution only. The surrogate recoveries are not determined because of the high dilution. Benzoic acid exceeded the calibration range and is qualified as estimated.

Calibration Summary:

The continuous calibration verification (1E05006-CCV2) had 4-chloro-3-methylphenol and 2,4,5-trichlorophenol with high recoveries. Since these compounds were not detected in any of the samples, no qualification is required. The compound 2,4-dinitrophenol and 4,6-dinitro-2-methylphenol had low recoveries. All results for these compounds in the samples associated with this CCV are qualified as estimated.

QC Sample Summary:

The blank spike (1100175-BS1) had high recovery for 4-chloroaniline. Since this compound was not detected in any of the samples, no qualification is required. Pyridine did not extract. All results for this compound are qualified as estimated.

The initial calibration verification (1E05006-ICV1) had 4-chloro-3-methylphenol with high recovery. Since this compound was not detected in any of the samples, no qualification is required. The compounds hexachlorocyclopentadiene and 2,4-dinitrophenol had low recoveries. The results for these compounds in all of the associated samples are qualified as estimated.

Internal Standard/Surrogate Summary:

No difficulties or unusual circumstances were encountered during this analysis.

Modified EPA method 8015D, "Nonhalogenated Organics Using GC/FID," revision 4, May 2003. This method was used for the analysis of the TPH/GRO and TPH/DRO.

EPA method 8021B, "Aromatic and Halogenated Volatiles by Gas Chromatography Using Photoionization and/or Electrolytic Conductivity Detectors," revision 2, December 1996. For this analysis, only the PID was used for detection of methyl-tert-butyl ether (MTBE), benzene, toluene, ethylbenzene, xylenes, and naphthalene.

EPA Region 8 laboratory SOP ORGM-506, "Determination of BTEX, MTBE, Naphthalene, and TPH/GRO Using 8021B and 8015D Modified".

EPA Region 8 laboratory SOP ORGM-508, "Determination of Diesel Range Organics Using 8015D Modified".

Analyst Notes:

BTEX/GRO:

No difficulties or unusual circumstances were encountered during these analyses.

TPH/DRO:

Case Comments

The holding time for sample Trip Blank (1104026-04) was exceeded by 30 minutes. The TPH/DRO result for this sample has been qualified as estimated, "J."

Samples EPAMW02-0411 (1104024-06), EPAMW02d-0411 (1104024-07), and EPAMW01-0411 (1104026-01) had an initial pH of 12 and the methylene chloride extracts for these samples were "soapy."

Some of the TPH/DRO chromatograms required manual integrations due to poor integration by the quantitation software. The quality of the data was improved by a more realistic quantitation.
